

Integral Safety Kit

The ISK FIRE SURVIVAL is a system that provides the material and technical resources necessary to establish a survival zone in critical situations of fire entrapment. It includes a safety procedure, which contributes to increase the survival probability of personnel in situations of extreme risk.

FIRE FIGHTER FIRE PROTECTION

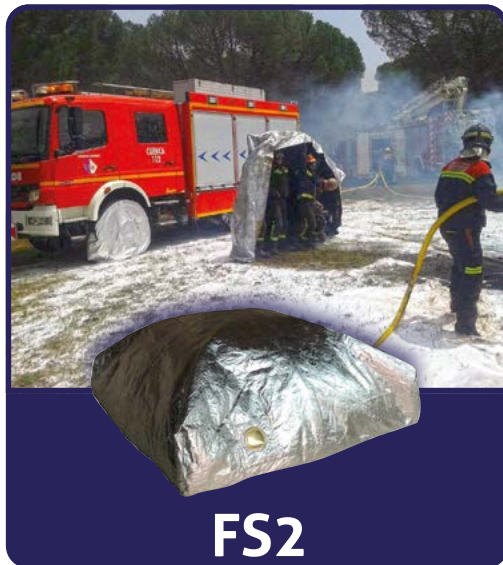

FS1

INTEGRAL PROTECTION NOZZLE

The ISK FIRE SURVIVAL is a system that provides the material and technical resources necessary to establish a survival zone in critical situations of fire entrapment. It includes a safety procedure, which contributes to increase the survival probability of personnel in situations of extreme risk.

Includes the following components:

- Nozzle
- Fire Hose (L = 13 m, Ø = 25mm).
- Short term retardant (V = 9L).
- Foam inductor for external injection of extinguishing agent.
- Carrying bag

FS2

COLLECTIVE SHELTER

The Fireproof and Waterproof Collective Shelter is specially designed to promote the safety and protection of combat personnel, in extreme situations of entrapment by fire, where the existing environmental conditions of temperature and gases are incompatible with human life. Its features, as well as its use, allow it to be considered as collective protection equipment in the fire sector.

🚒 **FS2.4 capacity for 4 people.**

🚒 **FS2.6 capacity for 6 people.**

Applicable to any brigades, heavy machinery and fire engines with and without water availability.

Includes the following components:

- Fireproof shelter for 4 or 6 people
- Lighting system
- 4 or 6 breathing air masks, according to model
- Vacuum pump
- Carrying bag
- Compressed air bottle with regulator (maintenance contract is not included)
- Options: GPS, O2 Detector

VEHICLE FIRE PROTECTION

FS4

COVER BLANKET

The Thermal Cover blanket offers protection of Tyres, pneumatic parts and critical components of the vehicle. Fireproof and Impermeable, it is specially designed to establish the protection of the lower sections of the vehicle and to avoid its ignition in extreme situations of exposure to fire.

 Model FS4H (Heavy Vehicles).

 Model FS4L (Light Vehicles).

Applicable to extinguishing vehicles (heavy - light), in addition to other personnel or logistics transport vehicles that may be involved in a trapping situation.

FS5

FIRE BARRIER CURTAINS

The internal FIRE Barrier Curtains offers protection of people inside the cab. It is made of multiple layers of aluminum that provide burn protection on fire engines, bulldozers, or other fire safety equipment. The curtain is held in place and can easily be deployed by pulling on the reflective tabs and align the curtains edges located in your vehicle. Their ability to handle heat and flames make this product an invaluable safety addition for the fire fighter.

We have solutions for any type of cab and vehicles.

Includes the following components:

- 1 aluminum Cover blanket including a Carrying bag

ISK Fire®
Survival

SECURITY – SAFETY – ASSISTANCE

Self-protection and survival system, specially designed by firemen to help establish a safety area to protect persons and vehicles in hazard situations of fire entrapment in wildfires. The benefits of the complete system, the elements that form it and its purpose of use, allow it to obtain the consideration of collective protection equipment in the fire sector.
